

Client Case Study

Autistic Spectrum Disorders

NES Health: A Brief Overview

Working in the complementary and alternative healthcare market, NES Health has developed an informational healthcare solution which helps to support and stimulate the body's own self-healing capacity.

All NES-certified practitioners are highly-trained in a range of alternative health modalities. They use a unique device to explore a client's body-field and uncover distortions or blockages in that field, which may have a detrimental effect in the body's ability to deal with chemical, physical, emotional and environmental toxins and which, in turn, lead to negative symptoms.

NES Health aims to detect these distortions and provide a helping hand via the Infoceuticals, to aid the body-field in correcting itself. Infoceuticals are revolutionary drops specifically created by NES Health to establish integrity in the human body-field. The NES Infoceutical drops are safe, effective and simple to use. Taken as drops in water, NES Infoceuticals contain micro quantities of colloidal minerals which have been 'encoded' with information to interact directly with the human body-field to remove or resolve blockages or distortions.

Case Study

The following case study has been provided by an experienced and successful alternative health therapist to demonstrate the use of the NES Health solution with a 7 year old child with severe Autism.

All names have been changed to preserve confidentiality. Each section entitled Infoceuticals: details the Infoceutical drops taken by the child each month.

Case History

- Severely autistic
- Attends a special school
- School report before beginning with NES
 - "a lot of sensory issues"
 - "no learning taking place"
 - "not able to concentrate"
 - "would not co-operate"
- Coming home from school very upset and difficult to control. Parents unable to hold him.
- It would not be unusual for Sam to cry throughout the day when at home.
- Chronic constipation had Sam in absolute agony, literally screaming. This would upset his parents terribly. Medication proved to be ineffective.
- His parents were very worried about the quality of life Sam would have.

September

Infoceuticals: Polarity and Muscle Driver

October

Jane, Sam's mum reported that there was noticeable improvement with Sam's bowel.

Infoceuticals: Polarity and Imprinter

November

Bowel movements were causing Sam no distress. The periods of screaming had subsided.

Infoceuticals: Polarity and Stomach Driver

January

Jane reported that good comments were coming home from school. Sam was now able to concentrate on various activities. No bowel issues at all.

Infoceuticals: Mucous Membranes-Small Intestine Meridian and Memory Imprinter

February

The school had reported that Sam's ability to concentrate on activities had improved further.

Infoceuticals: Mucous Membranes-Small Intestine Meridian and Bone Marrow-Stomach Meridian

March

Sam has been making so much progress that Jane (his mum) had to speak to his teacher about getting more challenging work for him to do at home. Sam no longer comes home from school upset. Usually he would be in bad form and cry a lot.

Sam's school assistant, Belinda, came with Sam and Jane on this visit. Belinda was curious as to how Sam was making so much progress.

Infoceuticals: Big Field Aligner and Stomach Driver

April

Sam has started to speak, or as his mum Jane said, "He now has words that others can understand". Jane's mum began to cry when she heard Sam speak for the first time. He has improved so much in school that he now needs extra and more difficult work to engage him.

Infoceuticals: Big Field Aligner and Source Driver

May

Jane reported, "Sam is more with you now, he knows what you are saying to him and he is talking more". Sam received a special award at school for improved concentration. Sam arrived at school one morning and greeted one of the classroom assistants with, "Hello Penny". Penny was amazed at this.

Infoceuticals: Source Driver, Nerve Driver and Spleen Driver.

June

Jane reported:

- Sam is achieving great work in school and he is in really good form.
- He is writing now and can make the letters for his name.
- He is talking lots more.
- I can speak to Sam now as I would speak to my other children e.g. if I tell him to close the door he does it.
- I was amazed when one night at bedtime after I had taken him through his prayers he then said another prayer that I was unaware he knew. Apparently he had been learning this prayer in school. His demeanour indicated that he was pleased with himself at being able to say it.

Sam received a special certificate from school. The school reported:

- "Excellent progress in concentration skills and in class participation, noticeably being able to take turns in circle time."
- "Excellent progress in using a visual schedule."
- "Good progress in core skills."

In speech and Language, Sam:

- Named animals and made their associated sounds.
- Sat well, sorted and matched holiday pictures.
- Played with toys on a road map.
- Spoke more in the most recent twenty minute session than he had spoken previously in the whole year.

Infoceuticals: Polarity, Spleen Driver and Neurotransmitters-Heart Meridian

July

Sam has not been very well this past week and his mood has not been good either. Jane thought that perhaps Sam was like this as he was out of his normal routine as it is holiday time from school.

Infoceuticals: Polarity, Cell Driver and Skin Driver

August

Sam is now remaining dry through the night. Jane describes him as being a different child now, much more content. He is singing nursery rhymes with the television programme. Speech is getting clearer and clearer.

On a trip to the swimming pool Sam's dad remarked that while the family were in the pool, Sam's eye contact with his mum was very noticeable. Sam's classroom assistant Belinda had also noticed a marked improvement in eye contact when she visited Sam's home.

Jane also reported that the family were at last able to have a holiday together. Last year they had tried to holiday together but had to abandon it because Sam was proving too difficult to handle. Now Sam is enjoying life with his family.

Jane noticed that Sam was displaying understanding of what was happening around him. Sam's granny and Granddad arrived to take his sister away for a treat and as soon as she left Sam's mood changed. He became very difficult, so much so that Jane took Sam out to lunch to try to cheer him up. However, Sam's mood remained difficult until his sister arrived back home. Both parents said that the change in mood was very noticeable.

Infoceuticals: Mucous Membranes-Small Intestine Meridian, Neurotransmitters-Heart Meridian and Lymphatics-Bladder Meridian

Sam's parents want him to continue with NES and I shall see him again next month.
